Acknowledgments	ix
Foreword	xxxi
Introduction	xxiii
 Part I: Introducing AutoCAD and AutoCAD LT Basics	1
Quick Start: Drawing a Window	3
Summary	13
Chapter 1: Starting to Draw	15
Exploring AutoCAD's Advantages	15
Comparing AutoCAD and AutoCAD LT	16
Starting AutoCAD and AutoCAD LT	16
Creating a New Drawing	17
Using the AutoCAD and AutoCAD LT Interface	17
Exploring the drawing area	19
Exploring the ribbon and Quick Access Toolbar	20
Using the Application menu	20
Using the command line and dynamic input tooltip	21
Exploring the status bar	22
Creating a New Folder	22
Using the Interface	23
Saving a Drawing	25
Closing a Drawing and Exiting from AutoCAD and AutoCAD LT	26
Summary	27
Chapter 2: Opening a Drawing	29
Creating a New Drawing from a Template	29
Working with Templates	31
Creating your own templates	31
Creating a Drawing with Default Settings	32
Opening an Existing Drawing	32
Switching among open drawings	33
Saving a Drawing under a New Name	33
Summary	33

Chapter 3: Using Commands	35
Understanding the AutoCAD and AutoCAD LT Interface	35
Working with the ribbon	36
Displaying and using menus	37
Using shortcut menus	37
Working with dialog boxes	37
Using the Quick Access Toolbar	38
Managing palettes	38
Using the Tool Palettes window	38
Using the Command Line and Dynamic Input	39
Entering commands with Dynamic Input	40
Understanding command names	40
Responding to commands	42
Repeating commands	44
Using recent input	45
Canceling commands	45
Undoing a command	46
Redoing a command	47
Using one command within another command	48
Using Mice and Pucks	48
Getting Help	49
Getting help on a command	50
Using the main Help system	51
Summary	52
Chapter 4: Specifying Coordinates	53
Understanding the X,Y Coordinate System	53
Drawing units	54
Typing coordinates	54
Using the Dynamic Input tooltip to enter coordinates	54
Working with absolute Cartesian coordinates	59
Working with relative Cartesian coordinates	60
Using polar coordinates	61
Using direct distance entry	63
Working in orthogonal mode	64
Working with polar tracking	64
Displaying Coordinates	68
Picking Coordinates on the Screen	69
Using snap settings	69
Using object snaps	74
Running object snaps and Object Snap mode	78
Overriding Coordinate Settings	79
Locating Points	82
Using object snap tracking	82
Using the temporary tracking feature	86
Finding points with point filters	87
Finding offset points with the From feature	87
Summary	89

Chapter 5: Setting Up a Drawing	91
Choosing Unit Types	91
Setting the drawing units	92
Setting the angle type	92
Setting the angle measure and direction	94
Drawing Limits	95
Understanding Scales	96
Working with scale formats	97
Using annotative scales	98
Customizing the scale list	100
Deciding on a scale and sheet size	102
Creating a Titleblock	102
Specifying Common Setup Options	103
Summary	106
 Part II: Drawing in Two Dimensions	 107
Chapter 6: Drawing Simple Lines	109
Using the LINE Command	109
Drawing Rectangles	111
Drawing Polygons	111
Creating Construction Lines	114
Creating Rays	115
Summary	117
Chapter 7: Drawing Curves and Points	119
Drawing Circles	119
Understanding the circle options	119
Creating circles	120
Drawing Arcs	122
Understanding arc options	123
Creating arcs	124
Creating Ellipses and Elliptical Arcs	127
Understanding ellipse options	127
Understanding elliptical arc options	127
Drawing ellipses and elliptical arcs	128
Making Donuts	130
Understanding DONUT options	130
Drawing donuts	131
Placing Points	131
Changing the point style	131
Creating points	132
Summary	134
Chapter 8: Viewing Your Drawing	135
Regenerating and Redrawing the Display	135
Panning	136

Using the ZOOM Command	136
Understanding ZOOM options	137
Using ZOOM Dynamic	138
Using the SteeringWheels	141
Creating Named Views	143
Saving a view	143
Displaying a view	147
Managing named views	147
Creating animated presentations from named views	147
Using named views to manage a drawing	150
Working with Tiled Viewports	152
Configuring tiled viewports	153
Using tiled viewports	155
Saving and restoring viewport configurations	155
Using Snap Rotation	157
Understanding User Coordinate Systems	159
Understanding UCS options	159
Saving and restoring a custom UCS	160
Controlling the UCS icon	161
Creating Isometric Drawings	163
Understanding isometric planes	164
Drawing in Isometric mode	164
Summary	165
Chapter 9: Editing Your Drawing with Basic Tools	167
Editing a Drawing	167
Understanding object-selection basics	168
Erasing objects	169
Moving objects	170
Copying objects	173
Copying and moving objects from one drawing to another	177
Rotating objects	178
Scaling objects	180
Using the CHANGE command	182
Selecting Objects	184
Selecting objects after choosing a command	184
Cycling through objects	186
Selecting objects before choosing a command	187
Implied windowing	187
Customizing the selection process	190
Summary	192
Chapter 10: Editing Your Drawing with Advanced Tools	193
Copying and Moving Objects	194
Mirroring objects	194
Using the ARRAY command	196
Offsetting objects	203
Aligning objects	205
Resizing commands	209
Trimming objects	209
Extending objects	213

Lengthening and shortening objects	216
Stretching objects	219
Using Construction Commands	222
Breaking objects	222
Joining objects	223
Creating chamfered corners	226
Creating rounded corners	229
Creating a Revision Cloud	231
Hiding Objects with a Wipeout	233
Constraining Objects with Parameters	233
Using geometric constraints	234
Auto-constraining objects	236
Using dimensional constraints	237
Working with the Parameters Manager	239
Double-Clicking to Edit Objects	242
Editing with Grips	242
Stretching with grips	244
Moving with grips	245
Rotating with grips	245
Scaling with grips	245
Mirroring with grips	245
Customizing grips	247
Editing with the Quick Properties Palette and the Properties Palette	248
Using the Quick Properties palette	248
Using the Properties palette	249
Working with object selection in the Properties palette	251
Working with Selection Filters	252
Using Quick Select to select objects	252
Using the FILTER command	254
Naming and editing filters	256
Using filters	256
Working with Groups	257
Creating and modifying groups	257
Using groups	258
Summary	258
Chapter 11: Organizing Drawings with Layers and Object Properties	259
Working with Layers	260
Understanding layers	260
Creating new layers	261
Using layers	269
Using special layer tools	275
Modifying layers	278
Manipulating Object Color, Linetype, Lineweight, and Transparency	283
Changing an object's color	283
Changing the current color	284
Altering an object's linetype	284
Altering the current linetype	285
Changing an object's lineweight	285
Changing the current lineweight	286

Altering an object's transparency286

Altering the current transparency286

Working with Linetype Scales289

 Changing linetype spacing by using a different linetype.....289

 Changing linetype spacing by changing the global linetype scale.....289

 Altering linetype spacing by changing the object linetype scale.....290

Matching Properties293

Summary294

Chapter 12: Obtaining Information from Your Drawing 295

Getting Drawing-Level Information295

 Listing the status of your drawing295

 Listing system variables.....296

 Tracking drawing time298

Using Object-Level Information.....298

 Listing objects.....299

 Finding coordinates.....300

 Measuring objects300

 Getting information from the Properties palette.....303

 Getting information from the Quick Properties palette304

Accessing Drawing Components305

 Using the Content Explorer.....305

 Finding components with the DesignCenter307

 Purging unused components.....310

Dividing and Spacing Objects.....312

 Dividing objects312

 Measuring objects313

The AutoCAD Calculator315

 Calculating numbers.....316

 Using coordinates.....318

 Using object snaps318

 Using the scientific calculator.....319

 Converting units319

 Working with QuickCalc variables320

 Using QuickCalc in the Properties palette.....321

Summary323

Chapter 13: Creating Text 325

Creating Single-Line Text.....325

 Justifying single-line text326

 Setting the height328

 Setting the rotation angle.....328

 Adding special characters and formatting329

 Editing single-line text331

Understanding Text Styles334

 Creating a new text style334

 Renaming and deleting text styles337

 Modifying a text style338

 Making a style current or changing a text object's style338

 Importing a text style.....339

Creating Multiline Text	339
Using the In-Place Text Editor	339
Creating text for different scales	348
Editing paragraph text	351
Importing text	351
Creating Tables	353
Inserting a table	353
Specifying a table style	355
Adding data to a table	358
Modifying a table	364
Inserting Fields	370
Creating fields	371
Editing and updating fields	373
Managing Text	374
Using Quicktext	374
Using AutoCAD and AutoCAD LT fonts	375
Turning off text layers	375
Using MIRRTEXT	375
Finding Text in Your Drawing	377
Checking Your Spelling	378
Summary	381
Chapter 14: Drawing Dimensions	383
Working with Dimensions	383
Understanding the elements of a dimension	384
Preparing to dimension	385
Drawing Linear Dimensions	386
Specifying the dimensioned object	386
Using dimension options	389
Creating jogged dimension lines	391
Drawing Aligned Dimensions	392
Specifying the dimensioned object	392
Using the options	393
Creating Baseline and Continued Dimensions	394
Drawing baseline dimensions	395
Drawing continued dimensions	396
Dimensioning Arcs and Circles	398
Marking arc and circle centers	398
Dimensioning arc lengths	399
Creating radial dimensions	399
Creating diameter dimensions	400
Dimensioning Angles	401
Creating Ordinate Dimensions	405
Drawing Leaders	407
Creating a multileader	408
Editing multileaders	408
Creating a multileader style	409
Aligning and combining leaders	412
Using Quick Dimension	416
Creating Inspection Dimensions	419

Creating Geometric Tolerances	421
Starting the tolerance frame	421
Inserting the tolerance frame	423
Editing a tolerance frame	423
Editing Dimensions	425
Editing associativity	425
Using the DIMEDIT command	427
Using the DIMTEDIT command	428
Flipping dimension arrows	429
Editing dimension text	430
Using the Properties palette to edit dimensions	430
Changing annotative scales	430
Spacing dimensions equally apart	431
Breaking dimensions	431
Using Quick Dimension to edit dimensions	432
Using grips to edit dimensions	433
Editing objects and dimensions together	434
Summary	436
Chapter 15: Creating Dimension Styles	437
Understanding Dimension Styles	437
Defining a New Dimension Style	439
Managing dimension lines	440
Defining symbols and arrows	442
Managing dimension text	446
Fitting dimensions into tight spaces	450
Defining primary units	456
Defining alternate units	459
Formatting tolerances	461
Changing Dimension Styles	464
Choosing a new current dimension style	464
Creating a variant of a dimension style	464
Modifying a dimension to use a new dimension style	465
Modifying dimension styles	465
Overriding a dimension style	466
Updating dimensions	467
Comparing dimension styles	467
Summary	470
Chapter 16: Drawing Complex Objects	471
Creating and Editing Polylines	471
Using the PLINE command	472
Editing polylines with the PEDIT command	475
Grip editing polylines	477
Editing polylines with the Properties palette or Quick Properties palette	478
Drawing and Editing Splines	480
Understanding splines	480
Creating splines	481
Editing splines	484

Creating Regions	486
Creating Boundaries	488
Creating Hatches	490
Understanding hatch patterns	491
Defining a hatch	491
Determining the hatch boundary	494
Managing islands	497
Dragging and dropping hatch patterns	498
Creating gradient fills	498
Editing hatches	499
Using the SOLID command	502
Creating and Editing Multilines	502
Creating a multiline style	503
Drawing multilines	507
Editing multilines	509
Creating Dlines in AutoCAD LT	511
Using the SKETCH Command	512
Digitizing Drawings with the TABLET Command	514
Summary	516
Chapter 17: Plotting and Printing Your Drawing	517
Preparing a Drawing for Plotting or Printing	517
Doing a draft plot	517
Plotting a drawing from model space	518
Creating a Layout in Paper Space	518
Entering paper space	518
Using the Layout Wizard	519
Laying out a drawing in paper space on your own	521
Annotating a layout	532
Saving a layout template	537
Working with Plot Styles	541
Setting the plot-style mode	541
Creating a plot-style table	542
Attaching a plot-style table to a layout	547
Setting the plot-style property for a layer or object	547
Plotting a Drawing	549
Specifying plot settings	551
Previewing your plot	553
Creating a plot stamp	553
Creating the plot	553
Summary	554
Part III: Working with Data	555
Chapter 18: Working with Blocks	557
Combining Objects into Blocks	557
Understanding base points and insertion points	558
Creating a block	558

Saving blocks as files.....562

Replacing an existing file.....564

Inserting Blocks and Files into Drawings565

 Using the Insert dialog box565

 Using the DesignCenter568

Managing Blocks.....571

 Working with block layers.....571

 Exploding blocks.....574

 Using the XPLODE command.....575

 Redefining a block.....577

 Editing blocks.....577

Creating and Using Dynamic Blocks.....579

 Understanding action-based parameters580

 Understanding the work flow of dynamic blocks.....581

 Defining a dynamic block with action-based parameters.....582

 Inserting and using dynamic blocks.....595

Using Windows Features to Copy Data.....604

 Manipulating objects with the Windows Clipboard604

 Using drag-and-drop.....605

Summary.....606

Chapter 19: Adding Attributes to Blocks.....607

 Working with Attributes.....607

 Creating Attribute Definitions.....608

 Mode section.....609

 Attribute section.....610

 Text Settings section.....610

 Insertion Point section.....610

 Creating the Block.....611

 Inserting blocks with attributes.....613

 Editing Attributes.....614

 Editing attribute properties with the BATTMAN command.....614

 Editing attribute properties with the ATTEDIT command.....617

 Making global changes in attributes.....618

 Redefining attributes.....619

 Extracting a Database from Attributes.....622

 Summary.....628

Chapter 20: Referencing Other Drawings.....629

 Understanding External References.....629

 Attaching an external reference.....630

 Opening an xref.....632

 Using the External References palette.....632

 Editing an Xref within Your Drawing.....636

 Choosing the xref or block to edit.....636

 Editing the xref.....637

 Controlling Xref Display.....640

 Working with dependent symbols in xrefs.....640

 Avoiding circular references.....641

Clipping xrefs.....	641
Speeding up the display of large xrefs.....	643
Managing Xrefs.....	647
Getting xref notification.....	649
Using DesignCenter to Attach a Drawing.....	650
Attaching Xrefs and Drawings from the Content Explorer.....	650
Creating an xref log file.....	650
Working with DWF, DGN, and PDF Underlays.....	651
Attaching a DWF underlay.....	651
Attaching a DGN underlay.....	652
Attaching a PDF underlay.....	652
Modifying an underlay.....	652
Summary.....	655

Part IV: Drawing in Three Dimensions 657

Chapter 21: Specifying 3D Coordinates 659

Working in a 3D Environment.....	660
Using 3D Coordinates.....	661
Absolute and relative Cartesian coordinates in 3D.....	661
Cylindrical and spherical coordinates.....	662
Using editing commands with 3D wireframes.....	663
Using point filters, object snaps, object tracking, and grips in 3D.....	666
Creating 3D polylines.....	671
Creating helices.....	671
Using point clouds.....	672
Using Elevation and Thickness.....	674
Creating surfaces with thickness.....	674
Using the HIDE command.....	676
Controlling the display of hidden lines and objects.....	677
Adding elevation to objects.....	679
Working with the User Coordinate System.....	681
UCSs and viewpoints.....	682
Dragging the UCS icon.....	682
Using UCS options to change the UCS.....	683
Changing the UCS dynamically.....	684
Summary.....	689

Chapter 22: Viewing 3D Drawings 691

Working with the Standard Viewpoints.....	692
Looking at a drawing from the standard viewpoints.....	693
Using VPOINT.....	695
Using the ViewCube to View Your Drawing.....	697
Creating a Named View with a Camera.....	698
Creating a camera.....	699
Editing a camera.....	700
Adding a Background to a Named View.....	704
Displaying a Quick Plan View.....	705

Displaying Parallel and Perspective Projections	706
Using 3D Orbit	706
Starting 3D Orbit	706
Navigating with 3D Orbit	708
Refining your 3D Orbit view	710
Using ShowMotion to Cycle Through Views	713
Creating shots	713
Displaying shots	715
Walking Through a Model	716
Navigating in Walk mode	717
Specifying Walk mode settings	718
Flying through a model	718
Saving the walk as a movie file	719
Using a motion path to save a movie file	720
Navigating with the SteeringWheels	724
Using DVIEW to Create a Perspective View	726
Using DVIEW	726
Understanding the DVIEW options	727
Working with Visual Styles	729
Displaying visual styles in AutoCAD	729
Creating custom visual styles	730
Using the shading options in AutoCAD LT	733
Display materials, textures, and lights as you work	734
Laying Out 3D Drawings	735
Flattening 3D drawings	736
Creating 2D view objects	737
Using SOLVIEW to lay out paper space viewports	740
Using SOLDRAW to create hidden lines and hatching	742
Using SOLPROF to create profiles	742
Printing in 3D	743
Summary	744
Chapter 23: Creating 3D Surfaces	747
Drawing Surfaces with 3DFACE	748
Using the 3DFACE command	749
Making 3D face edges invisible	749
Drawing Surfaces with PFACE	754
Creating Polygon Meshes with 3DMESH	758
Using the 3DMESH command	758
Drawing Procedural and NURBS Surfaces	760
Creating Planar Surfaces	761
Revolved surfaces	762
Drawing an Extruded Surface	767
Working with the TABSURF command	768
Working with the EXTRUDE command	770
Sweeping objects along a path	772
Drawing Surfaces Between Objects	773
Creating ruled surfaces	773
Lofting objects	775
Using the EDGESURF command	776

Using the SURFNETWORK command.....	778
Connecting surfaces with the SURFBLEND command.....	780
Patching holes with the SURFPATCH command.....	782
Editing and Analyzing Surfaces.....	784
Creating surfaces with the SURFOFFSET command.....	785
Trimming and extending surfaces.....	786
Filletting surfaces with the SURFFILLET command.....	787
Projecting objects onto surfaces.....	789
Analyzing surfaces.....	790
Working with Multiple Types of Objects.....	791
Converting 2D objects to surfaces.....	791
Converting meshes to smooth surfaces.....	791
Thickening a surface into a solid.....	792
Sculpting surfaces to create a solid.....	792
Extracting edges and isolines from a surface, solid, or a region.....	792
Summary.....	793
Chapter 24: Creating Solids and Editing in 3D	795
Drawing Basic Smooth Solids.....	796
Drawing a box.....	796
Drawing a wedge.....	797
Drawing a cone.....	798
Drawing a sphere.....	799
Drawing a cylinder.....	799
Drawing a torus.....	800
Drawing a pyramid.....	801
Creating Extruded Solids.....	804
Managing objects used to make other objects.....	804
Using the EXTRUDE command.....	805
Drawing Swept Solids.....	807
Drawing Revolved Solids.....	809
Drawing Lofted Solids.....	810
Drawing Polyline-Like Solids.....	813
Manipulating Solids.....	816
Grip-editing solids.....	816
Selecting subobjects.....	816
Moving, rotating, and scaling with the gizmos.....	817
Working with Mesh Shapes.....	823
Creating meshes.....	823
Editing meshes.....	823
Converting solids and meshes.....	826
Creating Complex Solids.....	831
Combining solids.....	831
Subtracting solids.....	832
Creating a solid from the intersection of two solids.....	833
Creating a solid from surfaces that enclose a volume.....	833
Creating a new solid by using INTERFERE.....	833
Pressing or pulling a region.....	836
Using solid history.....	837

Sectioning and Slicing Solids.....	839
Using the SECTION command.....	839
Creating an interactive section object	840
Using the SLICE command.....	842
Using Editing Commands in 3D.....	844
Mirroring in 3D	845
Arraying in 3D	846
Rotating in 3D.....	850
Aligning in 3D.....	852
Trimming and extending in 3D	854
Filleting in 3D	854
Chamfering in 3D.....	856
Exploding and converting 3D objects.....	856
Using the SOLIDEDIT Command	857
Editing faces	857
Editing edges	861
Editing bodies	861
Listing Solid Properties	865
Summary	866
 Part V: Organizing and Managing Drawings	 867
 Chapter 25: Keeping Control of Your Drawings	 869
Accessing Drawing Content with Tool Palettes.....	869
Creating a new tool palette	871
Adding content tools	871
Adding command tools.....	872
Copying a tool.....	872
Setting tool properties.....	873
Organizing tool palettes.....	876
Using a tool palette.....	876
Setting Standards for Drawings	879
Using the CAD Standards tools.....	880
Using layer notification.....	886
Translating layers.....	887
Renaming named objects.....	891
Working with Sheet Sets.....	891
Understanding sheet sets	892
Creating a sheet set	894
Setting up sheet set references	899
Using a sheet set	908
Organizing Your Drawings.....	914
Archiving drawings	914
Finding drawings	915
Specifying drawing properties	916
Maintaining Security	917
Password protection.....	917
Digital signatures	918

Keeping Track of Referenced Files	918
Handling Errors and Crashes	920
Taking care of temporary files	920
Repairing corrupted drawing files	921
Using backup drawings	922
Recovering from a crash	923
Managing Drawings from Prior Releases	923
Summary	924
Chapter 26: Working with Other Applications	925
Importing and Exporting Other File Formats	926
Exporting drawings	926
Importing files	931
Referencing geographic location data	934
Working with Raster Images	935
Attaching images	936
Managing images	937
Clipping images	939
Controlling image display	940
Pasting, Linking, and Embedding Objects	943
Embedding objects into a drawing	944
Using Paste Special	946
Linking data	947
Summary	950
Chapter 27: Collaborating and Creating Electronic Output	951
Opening Drawings from the Web	951
Using the Browse the Web dialog box	951
Using i-drop to drag objects into a drawing	952
Working with drawings on Autodesk 360	952
Sharing Comments with Design Feed	954
Creating Object Hyperlinks	955
Creating a hyperlink	956
Using a hyperlink	958
Editing a hyperlink	958
Publishing Drawings	959
Understanding DWF and DWFx files	960
Creating 2D DWF and DWFx files	960
Creating 3D DWF and DWFx files	966
Using the Publish to Web Wizard	967
Posting DWF and DWFx files directly	970
Editing web pages	971
Viewing DWF and DWFx drawings	971
Sending Drawings	977
Using eTransmit	977
Specifying transmittal settings	978
Summary	981

Part VI: Customizing AutoCAD and AutoCAD LT

983

Chapter 28: Customizing Commands, Toolbars, and Tool Palettes	985
Working with Customizable Files	985
Editing customizable files	988
Backing up customizable files	988
Using the command-line form of commands	989
Documenting your files	992
Creating Aliases for Commands	992
Creating aliases to Windows programs	993
Creating aliases to commands	993
Editing autocorrect and synonym lists	996
Customizing the Quick Access Toolbar	996
Creating and displaying a Quick Access Toolbar	997
Adding buttons	998
Creating a custom command	999
Removing custom commands	1002
Adding a drop-down list	1002
Customizing Toolbars	1006
Customizing classic toolbars	1006
Creating a new toolbar	1007
Removing buttons from a toolbar	1008
Creating flyouts	1008
Customizing the Status Bar	1009
Customizing Tool Palettes	1009
Summary	1011
Chapter 29: Creating Macros and Slide Shows	1013
Creating Macros with Script Files	1013
Creating the script file	1014
Running a script file	1015
Recording Actions	1018
Creating an action macro	1019
Editing an action macro	1020
Managing a macro file	1021
Playing back a macro	1021
Creating Slide Shows	1021
Creating slides	1021
Viewing slides	1022
Using scripts to create slide shows	1023
Creating Slide Libraries	1024
Summary	1026
Chapter 30: Creating Your Own Linetypes and Hatch Patterns	1027
Creating Linetypes	1027
Creating simple linetypes	1027
Creating complex linetypes	1029
Creating Hatch Patterns	1033
Summary	1038

Chapter 31: Creating Shapes and Fonts	1039
Creating Shapes	1040
Using shape files	1040
Creating shape files	1040
Editing shape files	1048
Creating Fonts	1048
Summary	1049
Chapter 32: Customizing the Ribbon and Menus	1051
Working with the Customization File	1051
Understanding the customization file	1051
Loading and unloading customization files	1052
Customizing the Interface	1055
Looking at a ribbon panel	1056
Writing macros	1059
Customizing the ribbon	1061
Customizing the Menu bar and shortcuts menus	1064
Customizing mouse buttons and tablet buttons	1073
Customizing image-tile menus	1075
Customizing tablet menus	1076
Creating keyboard shortcuts	1076
Customizing the double-click behavior	1079
Customizing the Quick Properties palette and rollover tooltips	1079
Summary	1081
Part VII: Programming AutoCAD	1083
Chapter 33: Understanding AutoLISP and Visual LISP Basics	1085
Introducing Visual LISP	1086
Opening Visual LISP	1086
Opening and loading an AutoLISP file with Visual LISP	1086
Loading an AutoLISP file	1086
Using an AutoLISP routine in AutoCAD	1089
Looking at an AutoLISP routine	1090
Using the Visual LISP Editor	1091
Closing a file and Visual LISP	1092
Getting Help in Visual LISP	1093
Working with AutoLISP Expressions	1094
Understanding AutoLISP syntax	1094
Working with numbers and text	1094
Using AutoLISP on the Command Line	1096
Creating AutoLISP Files	1097
Summary	1100
Chapter 34: Exploring AutoLISP Further	1101
Creating Variables	1101
Working with AutoCAD Commands	1102
Accessing AutoCAD commands	1103
Creating functions	1103

Contents

Creating functions with arguments	1106
Working with system variables	1108
Working with Lists	1110
Using lists for coordinates	1110
Creating dotted pairs	1111
Setting Conditions	1112
Using conditional statements	1112
Using Loop statements	1114
Managing Drawing Objects	1116
Getting information about an object	1116
Modifying objects	1119
Access an object's properties directly	1120
Creating selection sets	1121
Getting Input from the User	1124
Putting on the Finishing Touches	1126
Summary	1128
Chapter 35: Exploring Advanced AutoLISP Topics	1129
Understanding Global and Local Variables	1129
Working with Visual LISP ActiveX Functions	1131
Reviewing AutoLISP retrieval and modification	1131
Using ActiveX with Visual LISP	1136
Debugging Code	1140
Using the Error Trace window	1141
Working with breakpoints	1142
Using the Watch window	1145
Summary	1147
A Final Word	1147
Part VIII: Appendixes	1149
Appendix A: Installing and Configuring AutoCAD and AutoCAD LT	1151
Appendix B: AutoCAD and AutoCAD LT Resources	1191
Appendix C: What's on the Companion Website	1197
Index	1201
Bonus Chapters on the Companion Website	
Chapter 1: Working with External Databases	
Chapter 2: Rendering in 3D	
Chapter 3: Programming with Visual Basic for Applications	
Chapter 4: Programming with .NET
