

## CONTENTS

<b>Preface</b>		<b>xii</b>
<b>Chapter 1</b>	<b>What Is Artificial Intelligence?</b>	<b>1</b>
1.1	A Definition	1
1.2	The Underlying Assumption	3
1.3	What is an A.I. Technique?	5
1.3.1	Tic-Tac-Toe	6
1.3.2	Pattern Recognition	11
1.3.3	Conclusion	16
1.4	The Level of the Model	16
1.5	Criteria for Success	18
1.6	Some General References	20
1.7	One Final Word	21
<b>PART ONE</b>		
<b>PROBLEM SOLVING</b>		
<b>Chapter 2</b>	<b>Problems and Problem Spaces</b>	<b>25</b>
2.1	Defining the Problem as a State Space Search	25
2.1.1	Production Systems	31
2.1.2	Control Strategies	32
2.1.3	Heuristic Search	35
2.2	Problem Characteristics	37
2.2.1	Is the Problem Decomposable?	39

2.2.2	Can Solution Steps Be Ignored or Undone?	40
2.2.3	Is the Universe Predictable?	42
2.2.4	Is a Good Solution Absolute or Relative?	43
2.2.5	Is the Knowledge Base Consistent?	46
2.2.6	What Is the Role of Knowledge?	47
2.2.7	Does the Task Require Interaction with a Person?	47
2.3	Production System Characteristics	48
2.4	Additional Problems	51
2.5	Summary	52
2.6	Exercises	53
<b>Chapter 3</b>	<b>Basic Problem-Solving Methods</b>	<b>55</b>
3.1	Forward versus Backward Reasoning	56
3.2	Problem Trees versus Problem Graphs	60
3.3	Knowledge Representation and the Frame Problem	62
3.4	Matching	64
3.4.1	Indexing	65
3.4.2	Matching with Variables	66
3.4.3	Complex and Approximate Matching	68
3.4.4	Filtering the Output of the Match	69
3.5	Heuristic Functions	71
3.6	Weak Methods	72
3.6.1	Generate-and-Test	73
3.6.2	Hill Climbing	75
3.6.3	Breadth-First Search	77
3.6.4	Best-First Search: OR Graphs	78
3.6.5	Best-First Search: Agendas	84
3.6.6	Problem Reduction	87
3.6.7	Constraint Satisfaction	94
3.6.8	Means-Ends Analysis	99
3.7	Analyzing Search Algorithms	102
3.8	Summary	106
3.9	Exercises	107
<b>Chapter 4</b>	<b>Game Playing</b>	<b>113</b>
4.1	Overview	113
4.2	The Minimax Search Procedure	116
4.3	Adding Alpha-Beta Cutoffs	121
4.4	Additional Refinements	126
4.4.1	Waiting for Quiescence	126
4.4.2	Secondary Search	128

4.4.3	Using Book Moves	128
4.5	Limitations of the Method	128
4.6	Summary	130
4.7	References on Specific Games	130
4.8	Exercises	131
<b>PART TWO KNOWLEDGE REPRESENTATION</b>		
<b>Chapter 5</b>	<b>Knowledge Representation Using Predicate Logic</b>	<b>135</b>
5.1	Introduction to Representation	135
5.2	Representing Simple Facts in Logic	137
5.3	Augmenting the Representation with Computable Functions and Predicates	143
5.4	Resolution	148
5.4.1	Conversion to Clause Form	148
5.4.2	The Basis of Resolution	151
5.4.3	Resolution in Propositional Logic	153
5.4.4	The Unification Algorithm	154
5.4.5	Resolution in Predicate Logic	157
5.4.6	The Need to Try Several Substitutions	162
5.4.7	Question Answering	163
5.5	Natural Deduction	167
5.6	Summary	168
5.7	Exercises	168
<b>Chapter 6</b>	<b>Knowledge Representation Using Other Logics</b>	<b>173</b>
6.1	Introduction	173
6.2	Nonmonotonic Reasoning	176
6.2.1	Introduction to Nonmonotonic Reasoning	176
6.2.2	TMS: A Nonmonotonic Reasoning System	180
6.3	Statistical and Probabilistic Reasoning	184
6.3.1	Techniques for Dealing with a Random World	185
6.3.2	Techniques for Dealing with a Deterministic World without Enough Information	187
6.3.3	MYCIN: A Rule-Based System Using Inexact Reasoning	191
6.3.4	Conclusion: When Is Probabilistic Reasoning a Good Idea?	197
6.4	Summary	198
6.5	Exercises	198

<b>Chapter 7</b>	<b>Structured Representations of Knowledge</b>	<b>201</b>
7.1	Introduction	201
7.1.1	Some Common Knowledge Structures	204
7.1.2	Choosing the Level of Representation	207
7.1.3	Finding the Right Structures as Needed	211
7.2	Declarative Representations	213
7.2.1	Semantic Nets	215
7.2.2	Conceptual Dependency	222
7.2.3	Frames	229
7.2.4	Scripts	234
7.2.5	The Syntactic-Semantic Spectrum of Representation	238
7.3	Procedural Representation	239
7.4	Summary	242
7.5	Exercises	242
<b>PART THREE ADVANCED TOPICS</b>		
<b>Chapter 8</b>	<b>Advanced Problem-Solving Systems</b>	<b>247</b>
8.1	Planning	247
8.1.1	An Example Domain—The Blocks World	251
8.1.2	The Components of a Planning System	252
8.1.3	Simple Planning Using a Goal Stack	259
8.1.4	Nonlinear Planning Using a Goal Set	267
8.1.5	Hierarchical Planning	271
8.1.6	Nonlinear Planning Using the Least-Commitment Strategy	272
8.1.7	Planning Using Constraint Posting	276
8.1.8	Other Planning Techniques	277
8.2	System Organization	277
8.2.1	Agendas, Again	278
8.2.2	The Blackboard Approach	278
8.2.3	Delta-Min	281
8.2.4	Summary: Communication through Objects	283
8.3	Expert Systems	284
8.3.1	Structure of an Expert System	284
8.3.2	Interacting with an Expert System	288
8.3.3	Conclusion	291
8.4	Summary	291
8.5	Exercises	292

<b>Chapter 9</b>	<b>Natural Language Understanding</b>	<b>295</b>
9.1	Introduction	295
9.1.1	What Is Understanding?	296
9.1.2	What Makes Understanding Hard?	297
9.2	Understanding Single Sentences	302
9.2.1	Keyword Matching	305
9.2.2	Syntactic Analysis	307
9.2.3	Semantic Analysis	320
9.3	Understanding Multiple Sentences	328
9.3.1	Using Focus in Understanding	329
9.3.2	Using Goal Structures for Understanding	331
9.3.3	Using Schemas and Scripts in Understanding	333
9.3.4	Dialogue Understanding	334
9.4	Going the Other Way: Language Generation	338
9.5	Going Both Ways: Machine Translation	340
9.6	Summary	341
9.7	Exercises	341
<b>Chapter 10</b>	<b>Perception</b>	<b>345</b>
10.1	Why Is Perception Hard?	345
10.2	Techniques Used in Solving Perceptual Problems	349
10.3	Constraint Satisfaction—The Waltz Algorithm	351
10.4	Summary	358
10.5	Exercises	359
<b>Chapter 11</b>	<b>Learning</b>	<b>361</b>
11.1	What Is Learning?	361
11.2	Random Learning and Neural Nets	363
11.3	Rote Learning	363
11.4	Learning by Parameter Adjustment	365
11.5	Learning in GPS	367
11.6	Concept Learning	368
11.7	Discovery as Learning: AM	375
11.8	Learning by Analogy	383
11.9	Summary	386
11.10	Exercises	387
<b>Chapter 12</b>	<b>Implementing A.I. Systems: Languages and Machines</b>	<b>389</b>
12.1	A.I. Languages: The Important Characteristics	389

12.2	IPL	12.2.1 Introduction	393
12.3	LISP	12.3.1 Introduction	393
12.4	SAIL	12.4.1 Introduction	396
12.5	PLANNER	12.5.1 Introduction	396
12.6	KRL	12.6.1 Introduction	397
12.7	PROLOG	12.7.1 Introduction	401
12.8	Summary	12.8.1 Summary	403
12.9	Computer Architectures for A.I. Applications	12.9.1 Computer Architectures for A.I. Applications	405
12.10	Exercises	12.10.1 Exercises	406
<b>Chapter 13</b>	<b>Conclusion</b>		<b>409</b>
13.1	Components of An A.I. Program	13.1.1 Components of An A.I. Program	409
13.2	A.I. in Computer Science	13.2.1 A.I. in Computer Science	410
13.3	Exercises	13.3.1 Exercises	411
	<b>References</b>		<b>412</b>
	<b>Acknowledgements</b>		<b>427</b>
	<b>Author Index</b>		<b>429</b>
	<b>Subject Index</b>		<b>433</b>
