<tr>
<td>Preface</td>
<td>xv</td>
</tr>
<tr>
<td>Abstract</td>
<td>xviii</td>
</tr>
<tr>
<td>1 Introduction</td>
<td>1</td>
</tr>
<tr>
<td>1.1 Scope</td>
<td>1</td>
</tr>
<tr>
<td>The Book's Scope</td>
<td>1</td>
</tr>
<tr>
<td>This Chapter's Scope</td>
<td>1</td>
</tr>
<tr>
<td>1.2 Definitions of “Public Works” and “Infrastructure”</td>
<td>1</td>
</tr>
<tr>
<td>1.3 Examples of Infrastructure Projects</td>
<td>2</td>
</tr>
<tr>
<td>1.4 Categories of Public Infrastructure Projects</td>
<td>3</td>
</tr>
<tr>
<td>1.5 Typical Infrastructure Planning Steps</td>
<td>3</td>
</tr>
<tr>
<td>1.6 Goals and Objectives</td>
<td>4</td>
</tr>
<tr>
<td>1.7 Programming and Budgeting Process of Public Works Agencies</td>
<td>4</td>
</tr>
<tr>
<td>1.8 Evolution of Infrastructure Planning Process</td>
<td>5</td>
</tr>
<tr>
<td>The Evolution and History of Modern Public Works Planning</td>
<td>5</td>
</tr>
<tr>
<td>The Changing U.S. Federal Role in Infrastructure Planning</td>
<td>6</td>
</tr>
<tr>
<td>Development of the Modern Infrastructure Planning Process</td>
<td>7</td>
</tr>
<tr>
<td>The Effect of 9/11 on Planning</td>
<td>7</td>
</tr>
<tr>
<td>1.9 Relationships between Infrastructure and Development</td>
<td>8</td>
</tr>
<tr>
<td>1.10 Several Important Principles for Project Designs in Developing Countries</td>
<td>9</td>
</tr>
<tr>
<td>1.11 Federal Infrastructure Strategy Program</td>
<td>10</td>
</tr>
<tr>
<td>1.12 Infrastructure Asset Management</td>
<td>12</td>
</tr>
<tr>
<td>2 Planning Contexts, Perspectives, and Objectives</td>
<td>15</td>
</tr>
<tr>
<td>2.1 Scope</td>
<td>15</td>
</tr>
<tr>
<td>Some Words of Caution!</td>
<td>15</td>
</tr>
<tr>
<td>2.2 Planning Sequences</td>
<td>15</td>
</tr>
<tr>
<td>2.3 Basic Contexts for Planning Public Works and Infrastructure</td>
<td>16</td>
</tr>
<tr>
<td>2.4 Some Important Perspectives for Public Works and Infrastructure</td>
<td>20</td>
</tr>
<tr>
<td>Additional Important Considerations in Infrastructure Planning</td>
<td>25</td>
</tr>
<tr>
<td>2.5 Previously Mentioned “New” Objectives and Issues</td>
<td>26</td>
</tr>
<tr>
<td>2.6 Economic Objectives in the United States</td>
<td>27</td>
</tr>
<tr>
<td>2.7 Infrastructure Programs Which Do Not Require Benefit-Cost Analysis</td>
<td>29</td>
</tr>

2.8 Private Enterprises and Infrastructure Planning .......... 30
2.9 System of Law ................................................. 31
2.10 Federal Law .................................................. 32
2.11 State and Local Law ....................................... 32
2.12 Eminent Domain and Zoning .............................. 33
2.13 Water Rights ................................................. 34
2.14 Other Comments Concerning Legal and Institutional Issues ........................................ 34

3 Planning and Appraisal of Major Infrastructure Projects .......... 37
3.1 Scope .......................................................... 37
3.2 Sequence of Studies for a Single Major Infrastructure Project ........................................ 38
3.3 First Stage: Preliminary (or Reconnaissance) Report ........ 38
3.4 Second Stage: Feasibility Report ......................... 39
3.5 Third Stage: Final Design and Preparation of Contract Documents ........................................ 42
3.6 Fourth Stage: Construction .................................. 43
3.7 Fifth Stage: Operation ...................................... 43
3.8 Formulation of a Major Engineering Project ............... 43
3.9 Project Costs .................................................. 45
   Format of Budget Estimate of Investment Cost .......... 45
   Estimate of Annual Cost .................................. 47
   Components of Project Construction and Investment Costs ........................................ 48
   Components of Annual Costs ............................ 51
   Use of Indexes to Adjust Cost Estimates ................. 53
3.10 Costs for Professional Planning and Construction Services ........................................ 54
3.11 Appraisal Process Before Approval of a Major Project .......... 57
3.12 Project Delivery Methods .................................. 57
   Introduction ............................................... 57
   Features of Principal Types of Project Delivery Methods ........................................ 58
   Project Contract Types ................................... 58
   Traditional Project Delivery Methods .................. 59
   Alternative Project Delivery Methods ................... 59

4 Screening Projects and Master Planning ........................ 61
4.1 Scope .......................................................... 61
4.2 Planning Area ................................................. 61
4.3 Needs, Problems, and Opportunities in Planning Studies .......... 62
4.4 Screening Procedure for Single-Purpose Projects—Emphasis on Function, Engineering Factors, and Cost ........................................ 63
4.5 Case Study: Screening Procedure for Single-Purpose Projects—Emphasis on Function and Environmental/Social Factors ........................................ 66
4.6 Screening Procedure for Projects within a System, and for Projects That Serve Multiple Purposes and/or Multiple Objectives ........................................ 68
4.7 Concepts of Master Planning Reports for a Defined Geographic Area ............................................. 68
4.8 Hypothetical Master Planning Report as Synthesis of Numerous Comprehensive Studies .................. 69
4.9 Review and Adjustment of Data for Master and Regional Planning ............................................. 71
4.10 Case Study—Review and Adjustment of Proposals Prepared by Different Planners ..................... 72

5 Municipal Infrastructure Systems—Performance and Prioritization Measures ................................. 75
5.1 Scope ........................................................................................................................................ 75
5.2 Measures of System Performance of Various Public Works Elements and Types—National Research Council Studies ................................................................. 75
5.3 Trade-Offs between Repair, Renewals and Replacements, and New Construction ............................ 79
5.4 Cost-Effectiveness Measures for Projects of a Routine Nature ....................................................... 89
5.5 Prioritization of Projects for Maintenance, Rehabilitation, and Replacement of Local Infrastructure Systems—Urban Institute Studies .................................................. 90
5.6 Data Collection and Analysis for Decision Making—Case Studies of Water Distribution Systems ....... 93

6 Comparisons of Infrastructure Alternatives ...................................................................................... 103
6.1 Scope ........................................................................................................................................ 103
6.2 Methods for Comparing and Prioritizing Infrastructure Alternatives ............................................. 104
6.3 Formulas Involving Discount Rate and Use of Spreadsheets ......................................................... 104
6.4 Examples Showing Solutions of Problems Involving Comparisons of Public Works Alternatives, Using Interest Formulas and Spreadsheets .................................................. 106
   Some Variations of the Examples and the Use of Conversion Formulas ........................................... 108
6.5 Levelized Unit Cost or Price ........................................................................................................ 110
6.6 Life-Cycle Analysis .................................................................................................................... 110
6.7 Life-Cycle Analysis of Pavement Schemes .................................................................................... 112
6.8 Comparing Alternatives with Multiple Attributes ......................................................................... 114
6.9 Generic Matrix Approach for Comparing Alternatives with Multiple Attributes ........................ 115
   Introduction ................................................................................................................................ 119
   Implementation of Six-Step Method ............................................................................................... 119

7 Planning Aids ................................................................................................................................ 123
7.1 Scope ........................................................................................................................................ 123
   Some Words of Caution! ................................................................................................................. 123
7.2 Basic Data for Planning ................................................................................................................ 124
7.3 Classification of Data ................................................................................................................... 124

9.3 Some Principles of Methodologies for Economic Analysis of Public Works .......................................................... 180
9.4 Examples of Benefits Conforming to the Measurement Standard .......................................................... 183
9.5 Practical Methodologies Incorporating Multiple Objectives .................................................................................. 183
9.6 Price Elasticity .................................................................................................................................................. 184
9.7 Preferred Scale of Development (Considering Only Economic Efficiency) .......................................................... 184
9.8 Benefit-Cost Ratio and Other Measures for Ranking Projects in the United States .......................................................... 186
9.9 Characteristics of Benefit-Cost Ratio and Internal Rate of Return ........................................................................ 187
9.10 Selection of Discount (Interest) Rate .............................................................................................................. 187
9.11 Accounting for Inflation in Economic Analysis ............................................................................................... 188
9.12 Accounting for External Economies and Diseconomies in Economic Analysis ................................................. 189
9.13 With-and-Without Basis of Analysis—The Base Case (No Action Alternative) .................................................. 189
9.14 Local Infrastructure Costs as a Consideration in Economic Analysis .......................................................... 189
9.15 Value of Human Life as a Consideration in Economic Analysis ......................................................................... 190
9.16 Application of Shadow Pricing in Economic Analysis ....................................................................................... 190
9.17 Accounting for Risk and Uncertainty in Economic Analysis .................................................................................. 192
  Benefit-Cost Analyses That Consider the Frequencies of Natural Events .......................................................... 193
  Economic Allowance for Catastrophic Events ...................................................................................................... 194
  Benefit-Cost Analyses When Benefits and/or Costs or Their Components Have Probability Distributions .................................................................................. 195
9.18 Allocation of Costs of Multipurpose Projects ............................................................................................... 195
  Introduction ...................................................................................................................................................... 195
  SCRB Method ................................................................................................................................................ 196
9.19 Models for Estimating Economic Effects due to Infrastructure Development .................................................. 198
  Microeconomic and Macroeconomic Analyses .................................................................................................. 198

10 Economic Analyses—Applications .................................................................................................................... 199
10.1 Scope ...................................................................................................................................................... 199
10.2 Scope of Evaluations and Costs and Benefits ............................................................................................... 199
10.3 Format for Benefit-Cost Calculations ............................................................................................................. 200
10.4 Example of Benefit-Cost Analysis of Municipal Water Supply ........................................................................ 203
10.5 Examples of Benefit-Cost Analyses of Transportation Projects .................................................. 206
  User Benefit Analysis for Highways ................................................. 206
  Example of User Benefit Analysis Using
  the AASHTO Guidelines ...................................................... 208
10.6 Examples of Benefit-Cost Analyses That Illustrate Differences
  with Government or Private Sponsorship ....................................... 213
  Isolated Power Project .......................................................... 214
10.7 Example of Benefit-Cost Analysis with Application
  of Probability Analysis ........................................................ 216
10.8 Example of Benefit-Cost Analysis with Application
  of Sensitivity Analysis .......................................................... 218
10.9 Example of Cost Allocation for Facility Serving Multiple
  Purposes and/or Multiple Projects .............................................. 220
10.10 Examples Comparing Benefit-Cost Analysis with Sufficiency
  Ratings and Cost-Effectiveness Measures ...................................... 221
10.11 I-O Analysis of Benefits for Estimate of B/C Ratio ......................... 222

11 Environmental and Social Impact Assessment—Concepts,
  Requirements, and Procedures ............................................... 225
  11.1 Scope ........................................................................ 225
  11.2 General Concepts of Environmental
  and Social Impact Assessment .................................................. 226
  11.3 United States Laws, Regulations, and Policies Regarding
  Environmental and Social Impact Assessments .......................... 232
  11.4 CEQ Guidelines for Environmental Impact Statements .......... 232
  11.5 Interpretation of NEPA and CEQ Rules ................................. 236
  11.6 EPA Role in EIA and EIS Process ...................................... 236
  11.7 Scoping for the EIS ...................................................... 238
  11.8 The Ecological and Human Environments—Categories,
  Attributes, and Parameters ..................................................... 239
  11.9 Identification of Environmental and Social Impacts
  over Project Area and over Project Cycle ................................. 240
  11.10 Special Considerations Involving Land and Water
  Interrelationships, Energy Consumption, and Air Quality .......... 241
  11.11 Comparison of Project Alternatives Involving Environmental
  and Social Impacts, Including Examples ..................................... 242

12 Environmental and Social Impact Assessment—Additional
  Analysis and Issues ................................................................. 245
  12.1 Scope ........................................................................ 245
  12.2 Concepts of Human Environment, Human Well-Being,
  Social Well-Being, Social Welfare, and Quality of Life ................. 246
  12.3 Relationships Involving Infrastructure, Quality of Life,
  Business Development, and Urban Growth ............................... 247
  12.4 Scope of Social Impact Assessments ..................................... 247
  12.5 Environmental Justice ..................................................... 249
12.6 Sustainability and Environmental Economics .................. 250
12.7 Environmental Economics—General Concepts ................. 251
12.8 Studies by Government Agencies on Environmental Economics ............................... 252
12.9 Cost-Effectiveness Basis for Meeting Environmental Quality Objectives ........................... 252
12.10 Benefit-Cost Basis for Environmental Planning .................. 254
12.11 Role of Public Involvement in Planning ......................... 255
12.12 Purposes and Benefits of Public Participation ................ 255
12.13 Requirements for Public Participation ......................... 256
12.14 Factors That Contribute to Effective Participation ............ 256
12.15 Descriptions of Public Participation and Education Techniques ................................ 257
12.16 Case Study—New Hampshire Route 16 Corridor Study ........ 257

13 Sustainability ................................................................. 265
13.1 Introduction and Scope .................................................. 265
13.2 Historical Context .......................................................... 266
  Conservation Movement ................................................. 266
  Environmental Movement .............................................. 267
  Global Warming Concerns ............................................. 267
13.3 Sustainable Development and Sustainability ..................... 268
13.4 Dimensions of Sustainability ......................................... 270
  Social and Environmental Dimensions of Sustainability .... 270
  Economic Dimensions of Sustainability ......................... 271
13.5 Weak and Strong Sustainability ...................................... 271
13.6 Sustainability Models .................................................... 271
13.7 Approaches to Sustainability Issues in Infrastructure Planning .................................. 272
13.8 Global Implications of Sustainability ................................ 274
13.9 Sustainability Indexes .................................................... 279

14 Planning for Uncertainty and Risk ...................................... 285
14.1 Scope ........................................................................ 285
14.3 Risk and Uncertainty Analysis in Planning Organizations .......................................... 285
14.4 Selection of Parameters for Risk Analysis .......................... 288
14.5 Accounting for Unforeseen Changes and Events .................... 289
14.6 Common Sense and Intuition in Decision Making .................... 290
  Six Criteria for an Effective Decision-Making Process .... 290
  Eight Keys to Effective Decision-Making ........................... 291
14.7 Decision Theory .......................................................... 292
  Some Basic Concepts and Terms of Decision Analysis, Including the Payoff Matrix ................. 292
14.8 Utility Theory ............................................................. 294
  Paradigm of Decision Analysis Using Decision Trees .................. 295
14.9 Decision Analysis Approaches ........................................... 297
14.10 Example of a Decision Tree Analysis for Infrastructure Planning ........................................... 298
14.11 Application of Bayes Theorem to Decision Tree Problems ........................................... 299
14.12 Analytic Hierarchy Process (AHP) for Comparing Alternatives with Multiple Attributes ........................................... 302
Concepts of the Analytic Hierarchy Process and Summary Description of Methodology ........................................... 303
Case Study of Hypothetical Water Resources Project in Developing Country ........................................... 303
Some Methodological Details of the Case Study ........................................... 307
Appropriateness of the AHP ........................................... 309
Applications of AHP ........................................... 309
14.13 Other Infrastructure Planning Applications That Consider Uncertainty ........................................... 311

15 Operations Research Methods for Planning and Analysis ........................................... 313
15.1 Scope ........................................... 313
15.2 Nature and Applicability of Mathematical Models ........................................... 313
15.3 Mathematical Programming Models ........................................... 316
   Linear Programming ........................................... 316
   Dynamic Programming ........................................... 319
   Other Optimization Techniques for Mathematical Programming Problems ........................................... 321
15.4 Simulation Models ........................................... 321
15.5 Applicability of Mathematical Models with Multiple Objectives and/or Criteria ........................................... 325
15.6 Artificial Intelligence Systems ........................................... 328
   Fuzzy Logic and Its Use for AI Systems ........................................... 329
   Programming Languages ........................................... 330
   Example of Application of AI Methods to Project Operation ........................................... 331
15.7 Decision Support Models: Expert Systems ........................................... 332
   General Concepts of Expert Systems ........................................... 332
   Expert Systems for Infrastructure Evaluation and Repair ........................................... 333
15.8 Other Tools for Economic Models ........................................... 335
   Econometric Models ........................................... 335
   Export/Economic-Base Models ........................................... 335
   Multipliers and Accelerators ........................................... 337
   Simulation/Dynamic Models ........................................... 338
   Linking of Models ........................................... 339

Problems ........................................... 341
References ........................................... 371
Index ........................................... 391
