**PHP WEB APPLICATION:
PLAN AND ACTIVITY MONITORING APPLICATION FOR BINUS
INTERNATIONAL IT DEPARTMENT**

Alexander Khioe 1000886752

Abstract

The aim of this thesis project is to create a web application for monitoring the activity that has been planned beforehand for the IT department staff. The main benefit of this project is to enhance the productivity of the work from IT department. With this thesis, the author wants to prove the expandability of the application itself. This application prototype was devoted for the Binus International IT department.

The result of this thesis is a web application that uses PHP as its language, ready to be modified by the department. After the modification has been done, the web application is then integrated, and ready to be used by the users.

At the conclusion, the application has been completed, and ready to be modified then integrated to the main server.

Keywords

Web application, PHP, Binus IT department, modify, integrate, expandable, monitor.
